FOR IMMEDIATE RELEASE

Minuteman[®] Endeavor On-line Uninterruptible Power Supply Sets a New Standard for Flexibility, Capacity and Value

Carrollton, Texas – January 12, 2007

Para System, Inc., a leader in power technology with its line of Minuteman[®] Uninterruptible Power Supply (UPS) systems, announces its Minuteman[®] Endeavor[™] On-line UPS Series combining double-conversion technology and industry-leading features. Its unique design and flexibility allows the units to be installed in one of several configurations depending on the situation:

- **Rack/cabinet configuration** (19-inch rack kit included, 23-inch rack kit optional)
- **Tower configuration** (installation kit included)
- **Wallmount configuration** (installation kit optional)

Double-conversion technology is designed so that the inverter is always connected to the output of the UPS. When utility line power is present, the inverter operates to charge the battery. Because the inverter is always

connected to the load, this design provides better filtering and a more stable output voltage than typical standby or line interactive technologies.

Models in the Endeavor Series are:

- ED1000RM2U - 1000VA / 800W
- ED1500RM2U - 1500VA / 1200W
- ED2000RM2U - 2000VA / 1600W
- ED3000RM2U - 3000VA / 2100W

Key features for the Endeavor Series include:

- **Virtually unlimited runtime** using external battery packs
- **Maximum 8 hour rapid recharge time** of batteries, no matter how many battery packs are installed, through the use of independent battery chargers in each external battery pack
- **Output receptacle control** through two independently controlled output circuits, allows users the ability to shutdown or reset specific connected devices without having to shutdown the entire output of the UPS
- **Compact design** at only 3.5 inches (89mm) high, Endeavor Series units can be installed in a rack or cabinet using only 2U of rack space and still provide the most battery runtime using the least amount of rack space

The Endeavor Series features a front panel display that provides information about battery status, connected load capacity, multiple alarms and warning indicators. It also serves a testing mechanism.

In addition to the various mounting/rack kits, the Endeavor UPS may be ordered with stand-alone Ethernet/SNMP communication an environmental sensor and/or a dry contact closure card for additional control and power management capabilities.

Detailed information can be accessed and control of the UPS via the new Minuteman SentryPlus™ software included, free with each Endeavor unit. It can be installed and accessed concurrently over USB, RS-232 and Ethernet connections when used with the Endeavor Series.

Para Systems offers a \$200,000 Minuteman Platinum Protection Plan™ for equipment connected to the Endeavor Series UPS systems. In addition, a standard, non-prorated, three-year warranty is provided on the UPS units including the batteries.

Recognizing the benefit of being environmentally conscious, Para Systems has developed the Endeavor Series to comply with the Restriction of Hazardous Substances (RoHS) directive as established and defined by the European Union. The Endeavor Series UPS systems are certified to the following standards: UL 1778, CSA, and CE. The 500VA, 2000VA, and 3000VA units are FCC Class A certified) and the 1000 VA unit is FCC Class B certified.

Lower costs, with more features, makes the Minuteman® Endeavor Series UPS the value leader in the UPS industry, with MSRPs between \$599 and \$1,399. The Minuteman® Endeavor Series UPS is in stock and ready for immediate delivery.

220V versions of the Endeavor Series will be available for distribution during the first quarter of 2007.

Background.

Para Systems, Inc. is a leading provider of power technologies including the Minuteman® uninterruptible power supplies (UPS) for mission-critical equipment protection such as computers, telecommunications systems, security systems and internet working devices. The Minuteman® UPS products range from 325VA

standby units to true sine wave, line-interactive, and on-line models rated up to 10kVA.

Para Systems provides SentryPlus™ remote power and network management controller software for all popular operating systems including Windows, Novell, Unix, and Linux. Para Systems also sells power distribution units (PDU), power management software, keyboard-video-mouse (KVM) systems and surge suppressors.

Additional corporate and product information is available at the Company's website www.minutemanups.com A free UPS sizing and selection tool is available at www.sizemyups.com that can determine which Minuteman UPS units can best meet your application's power protection needs and www.comparemyups.com that allows you to compare features to competitive products.

Minuteman® UPS is a registered trademark of Para Systems, Inc.
